<hr>
</body>
</html>
```

OUTPUT:

Welcome To HTML Lab

Hello. I am Harishankar J of Ernakulam.
I am a guy with no interest in anything that others are usually into.
I hate being told what to do.
I don't play well with others.
I have a bad temper.
I prefer doing things my way.

Q.3

3. Create an HTML file named headings_example.html.

1. Build a simple webpage representing the structure of a book using all six heading tags. The structure should be as follows:
    a. Use <h1> for the book's title: **"The Wonders of Nature"**.
    b. Use <h2> for the main sections:
        i. "Introduction"
        ii. "Chapter 1: Forests"
        iii. "Chapter 2: Oceans"
        iv. "Chapter 3: Mountains"
    c. Use <h3> for sub-sections under each chapter. Example:
        i. "Types of Forests" (under Chapter 1)
        ii. "Marine Life" (under Chapter 2)
        iii. "Famous Peaks" (under Chapter 3)
    d. Use <h4> for further subheadings under one sub-section (e.g., under "Types of Forests"):
        i. "Tropical Forests"

        ii. "Temperate Forests"
    e. Continue adding at least two more levels using <h5> and <h6> to represent finer details.

Add a brief paragraph under each heading to describe its content (e.g., under "Introduction," write: "This section provides an overview of the book's themes.").

CODE:

With ordered lists:

```
<DOCTYPE! html>
